

2016-2017 Columbus & Franklin County Seasonal Influenza Activity Weekly Summary (Week 14, Apr. 2nd, 2017– Apr. 8th, 2017)

Highlights

- In week 14 of 2017, all individual local flu activity indicator trends decreased, although most continue to be above their baseline averages. As a whole, flu intensity (composite indicator) decreased but remained elevated.
- Geographic spread and local intensity designation (Click [here](#) for definitions) = WIDESPREAD, MODERATE
- Local medical facility labs reported 1,969 tests run with 377 (19.1%) positive results for week 14 of 2017. This is lower than last week's 25.5% and is higher than the weekly baseline.
- The percentage of ED visits for influenza-like-illness (ILI) and respiratory symptoms both decreased compared to last week. The percentage of ED visits for both ILI and respiratory symptoms are above their respective baseline averages for the week.
- In week 14 of 2017, the trends for all categories of local over-the-counter medication sales tracked decreased (decrease in cough and cold, electrolyte, thermometer, chest rub, pediatric anti-fever, adult anti-fever, and throat lozenge sales) compared to last week.
- Nationally, influenza activity decreased but remained elevated. Please [visit the CDC website for specific information](#) (National data is usually updated on Friday of each week).

Local Flu Activity Dashboard *(All data are preliminary and may change as updated reports are received.)*

Reportable Conditions (Cumulative Numbers as of Apr. 13, 2017)	2012	2013	2014	2015	2016	2017 YTD
Pediatric Influenza Associated Death Reported by Year (based on date of death)	0	0	0	0	0	0
Influenza Associated Hospitalizations (IAH) Reported by Admission Year ⁶	394	301	875	448	292	662
<i>IAH comparison by Season (October - May or Weeks 35 - 20)</i>	<i>2011-12</i>	<i>2012-13</i>	<i>2013-14</i>	<i>2014-15</i>	<i>2015-16</i>	<i>2016-17</i>
<i>Current season (2016-17) is from week 35 through week 14.</i>	95	512	486	872	264	679

¹Interpret with caution. Indicators with small numbers subject to large weekly percentage fluctuations.
²Number of weeks "▲" = Increase (>2%), "▼" = Decrease (>2%), "●" = Stable (-2% to +2%).
³Black line is current years data. Based on data availability, red line is historical average (excluding pandemic year).
⁴Data Source: Medical claims data from athenaHealth® (www.athenahealth.com). Rate of Flu or ILI visits to Franklin County, OH athenaHealth® network primary care practices/physicians. Claims data are subject to filing and processing time lags. Historical data are updated when they are received.
⁵Franklin County, OH residents only (based on zipcode). NOTE: Excludes one hospital system included in the past due to technical changes affecting visit classification assignment and numbers.
⁶Confirmed cases only. Based on jurisdiction equal to Franklin County or City of Columbus and admission date available in ODRS.

Influenza Morbidity and Influenza-Like Illness (ILI) Reports

In week 14, the preliminary local influenza and influenza-like-illness (ILI) visit rate to athenaHealth® providers (4.8 per 1,000 visits) decreased compared to the previous week and is above its baseline average for the week (Figure 1). The week 14 percentage of all Emergency Department (ED) visits categorized as ILI decreased compared to the previous week (Figure 3) and is above its historic baseline for the week.

Nationally, during week 14 of 2017, 2.6% of patient visits reported through ILINet were due to influenza-like illness (ILI). The percentage is above the national baseline of 2.2% for week 14.

Laboratory Surveillance

During week 14 of 2017, reporting Franklin County sentinel medical facility laboratories tested 1,969 specimens, with 377 (19.1%) positive (Figure 4). The total number of tests done by local reporting labs from week 35 of 2016 through week 14 of 2017 is 46,524 with 7,852 (16.9%) positives (5,359 type A, 2,493 type B, 8 type A and B, 2 type unknown).

Nationally in week 14 of 2017, clinical laboratories reported 20,079 specimens tested for influenza viruses, 3,044 (15.2%) of which were positive (981 type A, 2,063 type B). Public health laboratories reported testing 922 specimens, 356 of which were positive (138 type A – of which 6 were A(H1N1)pdm09, 123 were A/H3, and 9 were not subtyped; 218 type B – of which 132 were Yamagata lineage, 22 were Victoria lineage, and 64 where lineage was not performed). Please visit the CDC website for more information, including cumulative data since week 40.

In week 14 of 2017, participating Ohio clinical labs reported 52,419 specimens tested for influenza this season thus far. Positive results include: (5) A(H1N1)pdm09; (626) A/H3N2; (4,063) Flu A Not Subtyped, and (3,317) Flu B (through 4/8/17). ODH Public Health Lab reported 1,196 specimens tested for influenza from various submitters this season thus far. Positive results include: (5) A(H1N1)pdm09; (723) A/H3N2; (238) Influenza B (through 4/8/17). Please visit the ODH website for more information.

ED Respiratory Visits

In the 14th week of 2017, the percentage of all ED visits categorized as respiratory decreased compared to the percentage seen the previous week and is above its historic baseline for the week (Figure 5).

Over-the-Counter (OTC) Medication Sales

In week 14 of 2017, the trends for all categories of local over-the-counter medication sales tracked decreased (decrease in cough and cold, electrolyte, thermometer, chest rub, pediatric anti-fever, adult anti-fever, and throat lozenge sales) compared to last week.
