Highlights

- The COVID-19 pandemic may affect healthcare seeking behavior which in turn would impact certain flu surveillance data.
- In week 16 of 2020, individual flu activity indicator trends decreased compared to last week. Due to similarities between some key indicators comprising the flu composite indicator to COVID-19 symptoms, the flu composite indicator is temporarily unavailable. With the decline in influenza lab positives and confirmed influenza associated hospitalizations to at or below baseline levels, flu activity currently appears low. Please see the individual indicators below.
- Local medical facility labs reported 545 tests run with 4 (0.7%) positive results for week 16 of 2020.
- The percentage of ED visits for both influenza-like-illness (ILI) and respiratory symptoms decreased compared to last week.
- In week 16 of 2020, the trends for all individual local over the-counter medication category sales tracked decreased (decrease in cough and cold, electrolyte, thermometer, chest rub, adult anti-fever, pediatric anti-fever, and throat lozenge sales) compared to last week.
- National week 16 flu activity was not available at the time of this report. In week 15, National flu activity was low. Please visit the CDC website for specific information.

Local Flu Activity Dashboard *(All data are preliminary and may change as updated reports are received.)*

Due to similarities of some of key indicators comprising the flu composite indicator to COVID-19 symptoms, the flu composite indicator is temporarily unavailable. Recent changes in health care seeking behavior due to COVID-19 concerns are likely impacting data, specially indicators that are flu-like. Please see the individual indicators below.

NOTE: Please see the divergence between indicators specific to both flu lab positives and confirmed influenza associated hospitalizations and those indicators based on symptoms/syndromes and sales in early-mid March. With the decline in influenza lab positives and confirmed influenza associated hospitalizations to at or below baseline levels, flu activity currently appears low.

1. Interpret with caution. Indicators with small numbers subject to large weekly percentage fluctuations.
2. Number of weeks *A* = Increase (>2%), *V* = Decrease (<2%), *S* = Stable (-2% to +2%).
3. Black line is current years data. Based on data availability, red line is historical average (excluding pandemic year).
4. Data Source: Medical claims data from athenaHealth® (www.athenahealth.com). Rate of Flu or ILI visits to Ohio (statewide) athenaHealth® network primary care practices/physicians. Claims data are subject to filing and processing time lags. Historical data are updated when they are received.
5. Franklin County, OH residents only (based on zipcode). NOTE: Excludes one hospital system included in the past due to technical changes affecting visit classification assignment and numbers.
6. Confirmed cases only. Based on jurisdiction equal to Franklin County or City of Columbus and admission date available in ODRS.
Influenza Morbidity and Influenza-Like Illness (ILI) Reports
Updated statewide influenza and influenza-like-illness (ILI) visit data from athenaHealth® was not available at the time of this report. The week 16 percentage of all Emergency Department (ED) visits categorized as ILI decreased compared to the previous week (Figure 3) and is above its historic baseline for the week.

National week 16 ILINet data was not available at the time of this report. Nationally, during week 15 of 2020, 2.9% of patient visits reported through ILINet were due to influenza-like illness (ILI) and is above the national baseline of 2.4% for week 15.

Laboratory Surveillance
During week 16 of 2020, reporting Franklin County sentinel medical facility laboratories tested 545 specimens, with 4 (0.7%) positive (Figure 4). The total number of tests done by local reporting labs from week 35 of 2019 through week 16 of 2020 is 63,870 with 12,438 (19.5%) positives (5,355 type A, 6,739 type B, 0 type A and B, 344 type unknown).

National week 16 lab data was not available at the time of this report. Nationally in week 15 of 2020, clinical laboratories reported 15,978 specimens tested for influenza viruses, 69 (0.43%) of which were positive (36 type A, 33 type B). In week 15, public health laboratories reported testing 475 specimens, 28 of which were positive (28 type A – of which 26 were A(H1N1)pdm09, 0 were H3N2, and 2 were not subtyped; 0 type B. Please visit the CDC website for more information, including cumulative data.

Updated week 16 ODH lab data was not available at the time of this report. In week 15 of 2020, Ohio clinical labs reported 99,598 specimens tested for influenza this season thus far. Positive results include: (730) A(H1N1)pdm09; (7) A/H3N2; (10,962) Flu A Not Subtyped, and (10,037) Flu B (through 4/11/2020). In week 16 of 2020, ODH Public Health Lab reported 1,033 positive influenza tests from various submitters this season so far. Positive results include: (626) A(H1N1)pdm09; (17) A/H3N2; (390) Influenza B (through 4/11/2020). Please visit the ODH website for more information.

ED Respiratory Visits
In the 16th week of 2020, the percentage of all ED visits categorized as respiratory decreased compared to the percentage seen the previous week and is above its baseline for the week (Figure 5).

Over-the-Counter (OTC) Medication Sales
In week 16 of 2020, the trends for all individual local over-the-counter medication category sales tracked decreased (decrease in cough and cold, electrolyte, thermometer, chest rub, adult anti-fever, pediatric anti-fever, and throat lozenge sales) compared to last week.
